Formula Field

Definition: Salesforce Formula Field is a **read-only** field that derives its value from a formula expression you define. The formula field is updated when any of the source fields change.

$$\text{Age} = (\text{Today} - \text{DOB}) / 365$$

The screenshot shows the 'Formula Field' configuration page in Salesforce. At the top, there are two input fields: 'Field Label' with the value 'Age' and 'Field Name' with the value 'Age'. Below these, there is a checkbox labeled 'Auto add to custom report type' which is checked, and a link to 'Add this field to existing custom report types that contain this entity'. The main section is titled 'Formula Return Type' and contains a list of radio buttons for selecting a data type: 'None Selected', 'Checkbox', 'Currency', 'Date', 'Date/Time', 'Number' (which is selected), 'Percent', 'Text', and 'Time'. To the right of these options, there are descriptive text blocks and example formulas for each type. At the bottom of this section, there is a 'Decimal Places' dropdown set to '0' and an 'Example' field containing '999'.

The screenshot shows the 'Formula Editor' in Salesforce. At the top right, there are buttons for 'Previous', 'Next', and 'Cancel'. The main area contains a text input field for the formula, with an example 'Fahrenheit = 1.8 * Celsius__c + 32' and a link to 'More Examples...'. Below the input field, there are two tabs: 'Simple Formula' and 'Advanced Formula' (which is selected). To the right of the input field, there is a 'Functions' panel with a dropdown menu showing 'All Function Categories' and a list of functions including 'ABS', 'ADDMONTHS', 'AND', 'BEGINS', 'BLANKVALUE', and 'BR'. At the bottom right of the functions panel, there is a button labeled 'Insert Selected Function'.

Simple Formula Advanced Formul

Insert Field

Age (Number) =

TODAY () - DOB__c

Age (Number) =

(TODAY () - DOB__c) / 365

2] Create a Formula Field "Applicant Type" If Age >= 18, then Print "Major", Else "Minor".

Age = 20;

If(Age >= 18){

Major

}

Else{

Minor

}

Insert Field Insert Operator

Applicant Type (Text) =

IF(Age__c >=18 , 'Major' , 'Minor')

True

False

Age	22
Applicant Type	Major

3] Create a formula field "Eligible for Voting".

- If Age >=18, then **Eligible for Voting** should show Tick (Checkbox) = TRUE.

- Else, Untick (Checkbox) = FALSE

Field Label
Eligible for Voting
Field Name
Eligible_for_Voting

Auto add to custom report type
☒ Add this field to existing custom report types that contain this entity

Formula Return Type

☐ None Selected
Select one of the data types below.

☒ **Checkbox**

Calculate a boolean value
Example: `TODAY() > CloseDate`

☐ Currency

Calculate a dollar or other currency amount and automatically format the field as a currency amount.
Example: `Gross Margin = Amount - Cost__c`

☐ Date

Calculate a date, for example, by adding or subtracting days to other dates.
Example: `Reminder Date = CloseDate - 7`

Insert Field
Insert

Eligible for Voting (Checkbox) =
`IF( Age__c >=18, True, False)`

Applicant Type	Major
Eligible for Voting	☒

4] Create a Formula Field "My Lucky Number".

- Lucky Number should be 33 for Major Applicant.

- Otherwise, Lucky Number must be 0.

My Lucky Number (Number) =

IF(Applicant_Type__c = 'Major' , 33 , 0)

True
False

Age	47
Applicant Type	Major
Eligible for Voting	☒
My Lucky Number	33

5] Create a Formula Field "Eligibility". Show Eligible or Not Eligible Logo as per Age.

Field Label Eligibility	Field Name Eligibility
Auto add to custom report type ☒ Add this field to existing custom report types that contain this entity i	
Formula Return Type	
☐ None Selected	Select one of the data types below.
☐ Checkbox	Calculate a boolean value Example: <code>TODAY() > CloseDate</code>
☐ Currency	Calculate a dollar or other currency amount and automatically format the field as a currency amount. Example: <code>Gross Margin = Amount - Cost__c</code>
☐ Date	Calculate a date, for example, by adding or subtracting days to other dates. Example: <code>Reminder Date = CloseDate - 7</code>
☐ Date/Time	Calculate a date/time, for example, by adding a number of hours or days to another date/time. Example: <code>Next = NOW() + 1</code>
☐ Number	Calculate a numeric value. Example: <code>Fahrenheit = 1.8 * Celsius__c + 32</code>
☐ Percent	Calculate a percent and automatically add the percent sign to the number. Example: <code>Discount = (Amount - Discounted_Amount__c) / Amount</code>
☒ Text	Create a text string, for example, by concatenating other text fields. Example: <code>Full Name = LastName & ", " & FirstName</code>
